DETAILED ACTION

Response to Amendment

Applicant's amendments to the claims, filed 8/15/2006, are accepted and appreciated by the examiner. Applicant has amended the claims and added new claim 19. In response to these amendments and in light of the following examiner's amendment, all previous grounds for rejection of the claims are withdrawn.

EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with John Sensny on 9/8/2006.

The application has been amended as follows:

In claim 1, on the first line, please replace the word "calibrating" with the word "determining".

In claim 1, please replace the period "." from the last line of the claim and replace it with "e. Using said determined grid parameters to calibrate the photolithographic tool."

In claim 8, please replace the period "." from the last line of the claim and replace it with "i. Using said determined grid parameters to calibrate the photolithographic tool."

Examiner's Reasons for Allowance

The following is an examiner's statement of reasons for allowance:

The applicant's claims are distinguished from the prior art of record for the reasons stated in the previous office action and as presented in applicant's response filed, 8/15/2006.

Specifically, the applicant's claimed invention is distinguished from the prior art of record for the means for and steps of determining grid magnification and rotation parameters of the wafer stage independent of the field parameters. Prior art of record has disclosed nearly identical steps for locating artifacts outside the wafer and using the measured distance between them in conjunction with the known actual distance between them to determine the true alignment of both the wafer and the photolithographic mask. The examiner herein presents the following new references which are the closest known art to the claimed invention: Tolsma (US pat pub 20050254030), Smith (US pat 6906780), and Oka (US pat 5976737) which are presented in addition to all previously noted prior art. None of these, either alone or in combination, disclose or suggest the determination of grid magnification and rotation of the wafer stage without the use of field parameters.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jonathan Moffat whose telephone number is (571) 272-2255.
